

Corrections for Table 25.1, posted 9 May 2001

Corrected values are given in *bold italics*.

- The original values for the columns 25.1a and 25.3 are correct, *given* the original values $p(x_p)$, which were rounded upward. The posted values for these columns use values of $p(x_p)$ taken to two significant digits.
- All the original values for the 25.2 column are incorrect. No idea how this error crept in.

Many thanks to **Jim Fry** (University of Rochester) for bringing these errors to our attention.

Table 25.1 Corrected values

Disease	Incidence			Heritability				
	Φ_p	Φ_r	x_p	x_r	$p(x_p)$	(25.1a)	(25.2)	(25.3)
Harelip	0.001		3.090		0.0034
